SAE AS13100 Standard and Related Resources

The SAE AS13000 ASQ Quality Management System Requirements for Aero Engine Design and Production Organizations Standard has been created to harmonize and simplify supplier quality requirements that are in addition to the requirements of AS9100/AS9100 Quality Management Systems. Requirements for Aviation, Space, and Defense Organizations and AS9100/AS9100 Advanced Product Quality Planning and Production Part Approval Process.

AS1300 sets out to create a common set of supplemental requirements with common reference materials to improve understanding, efficiency and performance while significantly simplifying the businesses of suppliers with multiple customers. The primary intent of this new standard is to improve overall product quality by focusing on the key systems and processes currently delivering consistent aerospace engine product quality.

Reference Manuals & Associated Forms

AS1300 Reference Manuals (RM) provide industry best practice patterns and case study materials on how to deploy quality tools effectively. Reference Manuals are updated and maintained by the ASQI Subject Matter Interest Groups and may be updated at any time when new or revised information becomes available. In support of the RM, ASQI also provides forms and templates for free download.
